1 Daily flow profiles

The figure shows daily flow profiles for sensor E4S 58 140, where flow (y-axis) is plotted against time of day (x-axis). Each line represents one day, and a general pattern can be observed with a peak around midday and a drop in the evening. Despite daily variations, the overall trend remains consistent during the busiest hours.

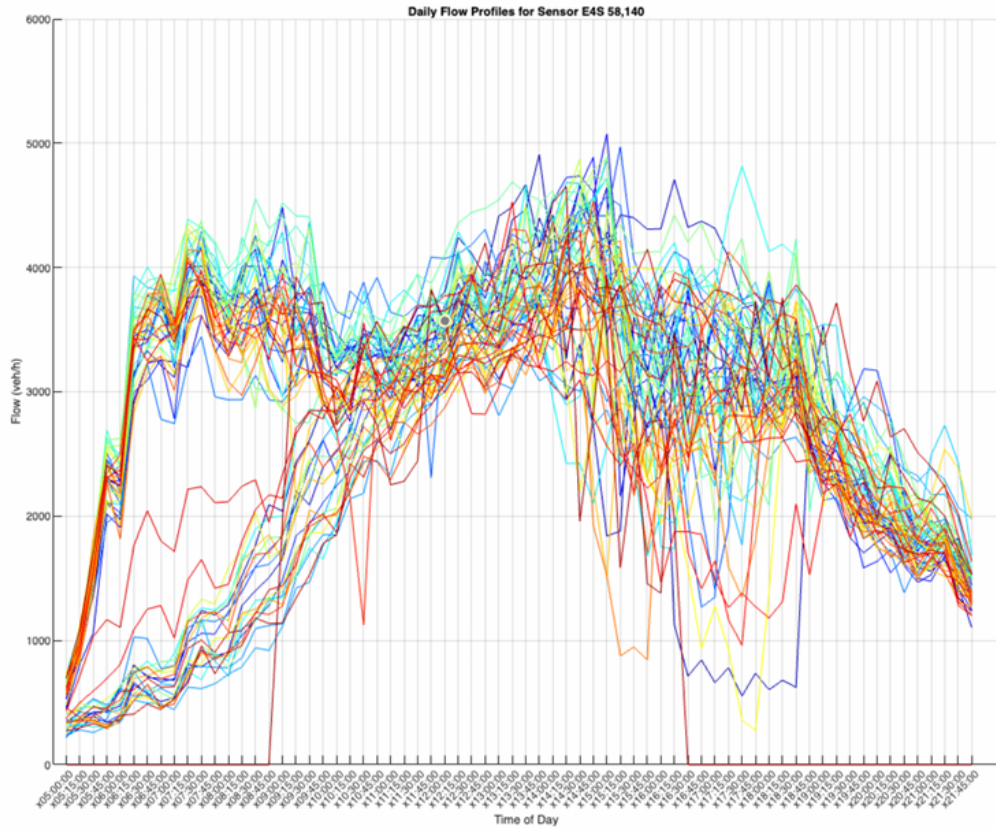

Figure 12: Flow profiles with time of day (x-axis) and speed (y-axis) for each day.
